

KWI Thailand ESG Fund-D

ThaiESG Dividend Distribution Class (KWI ThaiESG-D)

Type of Fund / Category of Fund

- Equity Fund / Thai ESG Fund / SRI Fund / Cross Investing Fund / Fund without Foreign Investment Exposure
- AIMC Category : Equity Large Cap

Investment Policy & Fund Strategy

- The Fund shall invest on average no less than 80% of its NAV in an accounting year in stocks listed on the Main Board of the Stock Exchange of Thailand (SET) and the Market for Alternative Investment (mai) that have been selected by the SET as outstanding in terms of environmental and ESG (Environmental, Social and Governance) consideration and have passed the process of ESG integration investment analysis. (Please see additional details of ESG investment policy on page 3.)
- For the remaining portion of investment funds, the Fund may invest in stocks other than those mentioned above, hybrid instruments, fixed income instruments, deposits and/or investment units of mutual funds as well as other securities or assets as permitted by the SEC Office. Furthermore, the Fund may invest in investment tokens issued under the Royal Decree on the Digital Asset Businesses, namely, green-project tokens, sustainability-project tokens or sustainability-linked tokens. In this regard, the regulations pertaining to characteristics of the digital tokens shall be in accordance with the notifications of the SEC Office with approval of the Capital Market Supervisory Board. (Investors can study additional details in the Fund’s Facts Section of the Prospectus.)
- The Fund may invest in other funds under management of the Management Company (cross investing funds) on average no less than 20% of its NAV in an accounting year.

Portfolio Management Strategy

- The Fund adopts an active management strategy aiming to outperforming the benchmark. (Active Management)

Additional Investment Policy

Objective of ESG Investing

The Fund has a policy to invest on average no less than 80% of its NAV in an accounting year in the stocks that are listed on the Main Board of the Stock Exchange of Thailand (SET) or the Market for Alternative Investment (mai) that have been selected by the SET as outstanding in terms of environmental and ESG (environmental, social and governance) consideration. These stocks have passed the process of ESG integration investment analysis and have obtained an SET ESG Rating of AA and above.

ESG Goals

ESG goals are the driving forces for greater number of ESG-focused activities which lead to sustainable ecosystems in the Thai economy and act as a mechanism that encourage listed companies and Thailand to achieve the Sustainable Development Goals (SDGs) adopted by the United Nations.

Investment Universe

The Fund will focus on investing in stocks of listed companies that are outstanding in dealing with the environmental, social and governance (ESG) issues, which have obtained an SET ESG Rating of AA and above and/or the level equivalent to AA and above according to the SET ESG Rating assessment criteria, by implementing ESG integration in the investment decision-making process.

Definitions

Maximum Drawdown :	The maximum percentage of loss of a fund over the past 5 years (or since inception if the fund has been established for less than 5 years). It is measured from the highest value of the fund's NAV per unit to the lowest value during the period that the NAV per unit is depreciating. The Maximum drawdown is used to assess the risk of possible loss that could occur from investing in a fund.
Recovering Period :	A duration of time that let the investors know how long it will take for a fund to recover from a peak of loss to the original level of investment.
FX Hedging :	Percentage of foreign currency denominated assets in the investment portfolio that are hedged against foreign exchange risk.
Portfolio Turnover Ratio :	The trading frequency of assets in the investment portfolio during a certain period of time. It is calculated by taking either the total amount of new securities purchased or the number of securities sold (whichever is less) over a period of one year, divided by the average net asset value (NAV) of the fund over the corresponding period. A fund with high portfolio turnover indicates that the securities in the portfolio are frequently traded by the fund manager and hence high securities dealing cost. Therefore, investors must take into consideration the performance of the fund in order to determine the cost worthiness of such securities trading transactions.
Sharpe Ratio :	A ratio between the excess return of a fund and the risk of investment. The Sharpe ratio reveals the average investment return, minus the risk-free rate of return, divided by the standard deviation of returns for the fund. The Sharpe ratio reflects the extra return that should be received by the fund to compensate the amount of risk taken in investment. The fund with a higher Sharpe ratio is considered superior to other funds in terms of management efficiency since it provides higher excess return under the same risk level.
Alpha :	The excess return of a fund relative to the return of a benchmark index. A fund with high alpha indicates that it is able to beat the performance of its corresponding benchmark which is a result of the capabilities of the fund manager in selecting appropriate securities for investment or making investment in a timely manner.
Beta :	A measure of the degree and direction of volatility of the rate of return of assets in the investment portfolio of the fund compared to the changes in the overall market. A beta of less than 1.0 implies that the rate of return of the fund's assets is less volatile than that of the securities in the broader market whereas a beta of greater than 1.0 implies that the rate of return of the fund's assets is more volatile than that of the broader market.
Tracking Error :	An indication of how efficient the actual performance of the fund can replicate its corresponding benchmark. A low tracking error implies that the fund has the efficiency to generate a return on investment close to the benchmark return whereas the higher tracking error, the more divergence of the fund from its benchmark.
