Additional Investment Policy

Objective of Sustainability Investing

The Fund has a policy to invest on average no less than 80% of its NAV in an accounting year in the stocks that are listed on the Main Board of the Stock Exchange of Thailand (SET) or the Market for Alternative Investment (mai) that have been selected by the SET as outstanding in terms of environmental and ESG (environmental, social and governance) consideration with the process of ESG integration investment analysis and have obtained an SET ESG Rating of AA and above. The Fund also can invest in equities with strong governance and have disclosed corporate value up plans to enhancing corporate value in accordance with international standards to benefit the Thai capital market in the long term.

Sustainability Goals

ESG goals are the driving forces for greater number of ESG-focused activities which lead to sustainable ecosystems in the Thai economy and act as a mechanism that encourage listed companies and Thailand to achieve the Sustainable Development Goals (SDGs) adopted by the United Nations, as well as encourage Thai listed companies to disclose their business goals and plans related to enhancing the value of their businesses for sustainability and well-being.

Investment Universe

The Fund will focus on investing in stocks of listed companies that are outstanding in dealing with the environmental, social and governance (ESG) issues, which have obtained an SET ESG Rating of AA and above and/or the level equivalent to AA and above according to the SET ESG Rating assessment criteria, by implementing ESG integration in the investment decision-making process and/or stocks of listed companies with good governance (Governance) by receiving the Corporate Governance Report of Thai Listed Companies (CGR) assessment from the Thai Institute of Directors Association of 90 points or higher, and disclosing the goals and business plans related to increase value of the business (Corporate value up plan) also a plan to enhance sustainability operations in accordance with international standards or actions to reduce Thailand's greenhouse gas emissions and report on the progress of the implementation of the targets or plans through the channels of the Stock Exchange of Thailand, which are specifically designed for the disclosure of such information, as well as to enhance communication with investors as specified by the Stock Exchange of Thailand.

Investment Benchmark Reference

The SET ESG (SETESG TRI) total return index (SETESG TRI) in the proportion of 100%, which reflects the stock price movements of listed companies assessed. This is in line with the direction of raters and leading index providers around the world to evaluate and select ESG stocks, as well as develop ESG indices to inform investors' decision-making:-

1) Screening companies that meet the criteria for sustainable stock evaluation under SET ESG Ratings (Pre requisite) as follows:

- It has been traded on the Stock Exchange of Thailand for at least 6 months.
- It has a market capitalization of not less than 5,000 million baht.
- The proportion of retail securities holders (Free-float) not less than 20% of the paid-up capital and
- The number of shares traded is not less than 0.5% of the company's registered shares for at least 9 out of 12 months.

Investors can learn about Index Methodologies at <https://www.set.or.th/th/market/index/setesg/profile>

2) Selected from listed companies that voluntarily responded to the SET's Sustainability Assessment and received at least half of the full score in each dimension (corporate governance and economic dimensions, environmental dimension, and social dimension), which have different weights for each dimension depending on the industry group.

The Management Company reserves the right to change the benchmark in comparison as the Management Company deems appropriate under the prescribed investment policy framework. The Management Company will change the above benchmark prepared by the Stock Exchange of Thailand when the TRI SET index that uses the proportion of retail holders of each security as a weighting in the calculation of the index in accordance with the Notification of the Capital Market Supervisory Board. The Management Company will disclose information and clearly notify investors in advance of the date of changing the index with an explanation and the reason for changing the index through the Management Company's website within a time when investors can take advantage of the information to make investment decisions.

However, in the case of changing the index to comply with the notifications, Terms and Conditions of the Association of Investment Management Companies and/or regulations under the Office of the SEC Board of Directors regarding the standard of measuring the performance of mutual funds and/or changes in indicators for comparative use in the event that the issuer of the index no longer provides or discloses such information/rates. The Management Company will notify the unitholders of such changes in advance through the Management Company's website within a time when investors can take advantage of the information to make investment decisions.

Other information

Additional redemption conditions: Investors who purchase the investment units of a Thai ESGX fund within 2025 must hold the investment units for no less than 5 years from the date of investment or the date of the switching transaction also must comply with the conditions specified by the Revenue Department.

Definitions

Maximum Drawdown :	The maximum percentage of loss of a fund over the past 5 years (or since inception if the fund has been established for less than 5 years). It is measured from the highest value of the fund's NAV per unit to the lowest value during the period that the NAV per unit is depreciating. The Maximum drawdown is used to assess the risk of possible loss that could occur from investing in a fund.
Recovering Period :	A duration of time that let the investors know how long it will take for a fund to recover from a peak of loss to the original level of investment.
FX Hedging :	Percentage of foreign currency denominated assets in the investment portfolio that are hedged against foreign exchange risk.
Portfolio Turnover Ratio :	The trading frequency of assets in the investment portfolio during a certain period of time. It is calculated by taking either the total amount of new securities purchased or the number of securities sold (whichever is less) over a period of one year, divided by the average net asset value (NAV) of the fund over the corresponding period. A fund with high portfolio turnover indicates that the securities in the portfolio are frequently traded by the fund manager and hence high securities dealing cost. Therefore, investors must take into consideration the performance of the fund in order to determine the cost worthiness of such securities trading transactions.
Sharpe Ratio :	A ratio between the excess return of a fund and the risk of investment. The Sharpe ratio reveals the average investment return, minus the risk-free rate of return, divided by the standard deviation of returns for the fund. The Sharpe ratio reflects the extra return that should be received by the fund to compensate the amount of risk taken in investment. The fund with a higher Sharpe ratio is considered superior to other funds in terms of management efficiency since it provides higher excess return under the same risk level.
Alpha :	The excess return of a fund relative to the return of a benchmark index. A fund with high alpha indicates that it is able to beat the performance of its corresponding benchmark which is a result of the capabilities of the fund manager in selecting appropriate securities for investment or making investment in a timely manner.
Beta :	A measure of the degree and direction of volatility of the rate of return of assets in the investment portfolio of the fund compared to the changes in the overall market. A beta of less than 1.0 implies that the rate of return of the fund's assets is less volatile than that of the securities in the broader market whereas a beta of greater than 1.0 implies that the rate of return of the fund's assets is more volatile than that of the broader market.
Tracking Error :	An indication of how efficient the actual performance of the fund can replicate its corresponding benchmark. A low tracking error implies that the fund has the efficiency to generate a return on investment close to the benchmark return whereas the higher tracking error, the more divergence of the fund from its benchmark.
